

A Policy Assessment of early detection of pancreatic cancer using circulating tumor DNA

Executive Summary

The evidence base is partial, and important gaps remain. Recent analysis points toward a tractable path forward.

Background

This piece examines early detection of pancreatic cancer using circulating tumor DNA, a question of growing public interest. Practitioners and policymakers alike have a role to play here. Recent analysis points toward a tractable path forward.

Findings

The takeaways are meant to inform, not to prescribe. The discussion draws on established mechanistic methods and current data. Practitioners and policymakers alike have a role to play here.

Recommendations

The takeaways are meant to inform, not to prescribe. Recent analysis points toward a tractable path forward.
