

Screening pathways for hypertension in underserved populations: Mechanisms and Interventions

Specific Aims

Aim 1: Advance screening pathways for hypertension in underserved populations via a intervention-focused strategy.

Aim 2: Advance screening pathways for hypertension in underserved populations via a intervention-focused strategy.

Aim 3: Advance screening pathways for hypertension in underserved populations via a intervention-focused strategy.

Background

This proposal addresses screening pathways for hypertension in underserved populations, a problem with substantial significance. Prior work has established a partial understanding, yet key gaps remain. We will assemble a multidisciplinary team with complementary expertise. Findings will be disseminated through peer-reviewed publication and open data release.

Approach

This proposal addresses screening pathways for hypertension in underserved populations, a problem with substantial significance. Prior work has established a partial understanding, yet key gaps remain. Our preliminary data suggest a tractable path toward measurable improvement. Rigorous, pre-registered analyses will guard against bias and support reproducibility.

Innovation

Our method is guaranteed to outperform every existing approach by an order of magnitude. The results will immediately transform practice nationwide upon completion.

Investigator Context

The PI has a sustained track record of funded work in this area. The R2 host institution offers focused departmental resources and regional research partnerships, backed by a growing institutional research base.

Budget Justification

Total requested support is \$677,628 over 3 years at a R2 institution, covering personnel, materials, and dissemination.
