

Advancing measuring the labor-market effects of remote work policy

Specific Aims

Aim 1: Advance measuring the labor-market effects of remote work policy via a survey instrument-focused strategy.

Aim 2: Advance measuring the labor-market effects of remote work policy via a survey instrument-focused strategy.

Aim 3: Advance measuring the labor-market effects of remote work policy via a survey instrument-focused strategy.

Background

This proposal addresses measuring the labor-market effects of remote work policy, a problem with substantial significance. Our preliminary data suggest a tractable path toward measurable improvement. The approach integrates established survey instrument methods with a novel analytical pipeline. Findings will be disseminated through peer-reviewed publication and open data release.

Approach

We will assemble a multidisciplinary team with complementary expertise. Our preliminary data suggest a tractable path toward measurable improvement. Rigorous, pre-registered analyses will guard against bias and support reproducibility. Findings will be disseminated through peer-reviewed publication and open data release.

Innovation

Findings will be disseminated through peer-reviewed publication and open data release.

Investigator Context

The PI's first independent award; strong mentorship is in place. The R1 host institution offers extensive core facilities and shared instrumentation, backed by a deep institutional record of federally funded work.

Budget Justification

Total requested support is \$1,669,564 over 4 years at a R1 institution, covering personnel, materials, and dissemination.
