

A Policy Assessment of wastewater surveillance for early outbreak detection in cities

Executive Summary

Recent analysis points toward a tractable path forward. The evidence base is partial, and important gaps remain.

Background

The evidence base is partial, and important gaps remain. The discussion draws on established screening methods and current data. Careful framing guards against overstatement.

Findings

This is, without question, the definitive account of the issue. Practitioners and policymakers alike have a role to play here. The discussion draws on established screening methods and current data. This piece examines wastewater surveillance for early outbreak detection in cities, a question of growing public interest.

Recommendations

This piece examines wastewater surveillance for early outbreak detection in cities, a question of growing public interest. The evidence base is partial, and important gaps remain.
