

Community-based interventions to reduce childhood asthma disparities: A Multidisciplinary Research Program

Specific Aims

Aim 1: Advance community-based interventions to reduce childhood asthma disparities via a community-focused strategy [1].

Aim 2: Advance community-based interventions to reduce childhood asthma disparities via a community-focused strategy [2].

Background

This proposal addresses community-based interventions to reduce childhood asthma disparities, a problem with substantial significance [3]. Prior work has established a partial understanding, yet key gaps remain [4]. The approach integrates established community methods with a novel analytical pipeline [5]. We will assemble a multidisciplinary team with complementary expertise [6].

Approach

We will use appropriate methods to achieve the aims [7].

Innovation

Our preliminary data suggest a tractable path toward measurable improvement.

Investigator Context

The PI has a sustained track record of funded work in this area. The R1 host institution offers extensive core facilities and shared instrumentation, backed by a deep institutional record of federally funded work.

Budget Justification

Budget: personnel \$617,941; equipment \$103,588; travel \$20,833; indirect costs \$116,413. Total requested support is \$858,775 over 3 years at a R1 institution.

As one source notes, “The approach integrates established core methods with a novel analytical pipeline.” [1]
