

Community-based interventions to reduce childhood asthma disparities: Evidence and Options

Executive Summary

Practitioners and policymakers alike have a role to play here [1]. The discussion draws on established community methods and current data [2].

Background

Careful framing guards against overstatement [3]. Recent analysis points toward a tractable path forward [4]. The takeaways are meant to inform, not to prescribe [5].

Findings

Practitioners and policymakers alike have a role to play here [6]. The takeaways are meant to inform, not to prescribe [7]. Recent analysis points toward a tractable path forward [8].

Recommendations

The discussion draws on established community methods and current data [9]. This piece examines community-based interventions to reduce childhood asthma disparities, a question of growing public interest [10].

As one source notes, “This proposal addresses the target problem, a problem with substantial significance.” [1]
