

Measuring the labor-market effects of remote work policy

Specific Aims

Aim 1: Advance measuring the labor-market effects of remote work policy via a field experiment-focused strategy [1].

Aim 2: Advance measuring the labor-market effects of remote work policy via a field experiment-focused strategy [2].

Aim 3: Advance measuring the labor-market effects of remote work policy via a field experiment-focused strategy [3].

Background

The approach integrates established field experiment methods with a novel analytical pipeline [4]. Our preliminary data suggest a tractable path toward measurable improvement [5]. This proposal addresses measuring the labor-market effects of remote work policy, a problem with substantial significance [6]. We will assemble a multidisciplinary team with complementary expertise [7].

Approach

Findings will be disseminated through peer-reviewed publication and open data release [8]. The approach integrates established field experiment methods with a novel analytical pipeline [9]. Prior work has established a partial understanding, yet key gaps remain. Our preliminary data suggest a tractable path toward measurable improvement.

Innovation

Prior work has established a partial understanding, yet key gaps remain.

Investigator Context

Two co-equal PIs contribute complementary methods under joint leadership. The R2 host institution offers focused departmental resources and regional research partnerships, backed by a growing institutional research base.

Budget Justification

Budget: personnel \$265,462; equipment \$95,223; travel \$8,779; indirect costs \$59,937. Total requested support is \$429,401 over 3 years at a R2 institution.

As one source notes, “Findings will be disseminated through peer-reviewed publication and open data release.” [1]
