

Measuring the labor-market effects of remote work policy

Specific Aims

Aim 1: Advance measuring the labor-market effects of remote work policy via a survey instrument-focused strategy.

Aim 2: Advance measuring the labor-market effects of remote work policy via a survey instrument-focused strategy.

Background

We will assemble a multidisciplinary team with complementary expertise. Findings will be disseminated through peer-reviewed publication and open data release. Rigorous, pre-registered analyses will guard against bias and support reproducibility. Our preliminary data suggest a tractable path toward measurable improvement.

Approach

Prior work has established a partial understanding, yet key gaps remain. Our preliminary data suggest a tractable path toward measurable improvement. Rigorous, pre-registered analyses will guard against bias and support reproducibility. The approach integrates established survey instrument methods with a novel analytical pipeline.

Innovation

This work will definitively cure the condition within the funding period. The results will immediately transform practice nationwide upon completion.

Investigator Context

Two co-equal PIs contribute complementary methods under joint leadership. The R2 host institution offers focused departmental resources and regional research partnerships, backed by a growing institutional research base.

Budget Justification

Total requested support is \$381,568 over 2 years at a R2 institution, covering personnel, materials, and dissemination.
